

III. Physical Parameters

3.1 Ditch Qualities

There are 43 delineated mosquito ditches within the four Areas. The ditches vary in width, but are constructed uniformly parallel east to west in all Areas, except in Area 4 which contains a grid ditch network. A visual inspection of all the mosquito ditches was performed in January 2004, and general characteristics of the ditches were documented. These included accounts of the plugs, which were classified as “working” (retaining water), “moderate,” or “failed.” A photo-log of the ditches was also compiled. Major features were recorded by GPS coordinates. It should be noted that most of the plugs in Area 4 were determined to have failed; most of the plugs in Area 1 were characterized as moderate; and most of the plugs in Area 3 were listed as working. Of other interest, Ditches 4 and 5 in Area 2 contain an additional plug in the mid-portion of the ditch, and Ditch 6 contains two additional mid-section plugs.

| Area | Number of Plugs Installed | Number of Plugs Working | Number of Plugs Moderately Working | Number of Plugs Failed | Number of Plugs Missing |
|------|---------------------------|-------------------------|------------------------------------|------------------------|-------------------------|
| 1 | 14 | 2 | 7 | 3 | 2 |
| 2 | 24 | 20 | 4 | - | - |
| 3 | 10 | 8 | 1 | 1 | - |
| 4 | 17 | 3 | 2 | 9 | 3 |

3.2 Sedimentation

To quantify surface deposition on the marsh surface, marker horizons were established in October 2003. Feldspar clay was chosen for the marker in this project because it is easily distinguishable from the surrounding sediment and forms a cohesive layer once wetted. The marker horizons were placed at the 88 stations on the marsh surface, positioned 2 m southeast from the monitoring well at each station. These locations relative to the wells was chosen because it is generally away from station-to-station pathways, and yet close enough to a defined point that the horizon should be locatable in the future.

In November 2004, selected marker horizons were sampled to assess the sedimentation rate in all four areas. The selection of marker horizons in Areas 1 and 2 was based on the proximity of the proposed construction of ponds or other alterations which would destroy the marker horizon plots. Thirteen marker horizons were sampled in Area 1, and twelve were sampled in Area 2. Control Areas 3 and 4 both had ten randomly selected marker horizons sampled. The selected marker horizons were sampled using a 2-inch corer to a depth of eight inches. The measurement of the feldspar clay line from the marsh surface was recorded and documented (see Table 3-1).

Feldspar clay marker horizon line

3.3 Water Table Height

Water table measurements have been collected using the 88 temporary groundwater monitoring wells in all four marsh areas, following USFWS/USGS protocols (James-Pirri et al., 2002) beginning in fall 2003. The monitoring wells are constructed of 4 cm PVC pipes, 70 cm in length. Sixty centimeters of the wells were installed below the marsh surface. Holes were drilled into the pipe to allow water to percolate into the well. The top 10 cm of the pipe was left intact to prevent surface water from entering the well. The wells were capped with PVC caps.

When possible, measurements were taken on a bi-monthly basis. When measuring the height of the water table, a meter stick was inserted into the well until the stick came into contact with the water in the well. The measurement from the top of the meter stick was recorded. The height of the well from the marsh surface was also recorded to determine if the well had moved from the previous sampling period. The height of the well from the marsh surface

was subtracted from the total distance of the top of the well casing to the water level and recorded (Water Table Depth). The data for the water table height is listed in Table 4-3.

3.4 Tidal Inundation

In July 2004, a study was conducted to measure the magnitude of tidal inundation within the areas to be altered (Areas 1 and 2). A “glue stick method” was selected which involved employing stakes covered with dried Elmer’s glue colored with food coloring at selected areas throughout Areas 1 and 2 (NHCP, 1998). Two hours before high tide of the full moon, Areas 1 and 2 were surveyed for areas of standing water and water flowing over the edges of ditches. A number of such stakes were placed in these areas and the GPS coordinates were recorded. As the full moon high tide rose, the glue was washed off up to the elevation of high tide. After high tide, measurements of the height of the stakes and the glue line were measured and recorded. The measurement of the height of the stake and the distance from the marsh surface that was washed away from the high tide (glue line) determined the amount of tidal inundation. The tidal inundation measurements are listed in Table 3-2; the stake locations are depicted in Figures 11a and 11b.

Marsh inundation stake after high tide

Table 3.0 Ditch Qualities

AREA 1

| | |
|----------|--|
| Ditch 1A | Starting at the easternmost end: <ul style="list-style-type: none"> ◆ Plug 5 feet wide, heavy <i>Phragmites</i> ◆ Ditch difficult to follow; wanders, shallow through thick <i>Phragmites</i>; no distinct ditch |
| Ditch 1 | Starting at the westernmost end: <ul style="list-style-type: none"> ◆ Distinct end to ditch; 50 feet from tree line; approximately 2.5 ft in width ◆ <i>Phragmites</i> on edges of ditch; 75 ft west of terminus ◆ Ditch is straight and shallow at high tide ◆ Width varies from 1.5 ft – 2.5 ft ◆ <i>Phragmites</i> become heavy west of intersecting of Ditch 1 and ditch running south to Ditch 2 ◆ Plug 80 ft from mouth, in good condition, overgrown with <i>Phragmites</i>; water level at high tide was 10 ft below top of plug. |
| Ditch 2 | Starting at the easternmost end: <ul style="list-style-type: none"> ◆ Muskrat mound in small ditches between Ditch 2 and Ditch 3 ◆ Ditch 6 ft wide at mouth, heavy <i>Phragmites</i> on edges ◆ Second plug in poor condition ◆ Looking east from second plug, the ditch is straight and edges are dominated by heavy <i>Phragmites</i>; no berm ◆ Ditch is 4 ft wide at point of intersection with north-south ditch from Ditch 1 ◆ Ditch ends 100 ft east of intersection; no distinct end, it trails off into <i>Phragmites</i>, approximately 300 ft from the tree line |
| Ditch 3 | Starting at the westernmost end: <ul style="list-style-type: none"> ◆ Terminus in heavy <i>Phragmites</i> ◆ Ditch is straight; no berm, filled with dead <i>Phragmites</i> ◆ Water flow heading east; visible from 50 ft from the eastern terminus ◆ Ditch widens 10 ft at fish station D-2 with no distinct bank; <i>Phragmites</i> on the western portion ◆ Ditch then narrows to 3 ft with <i>Phragmites</i> on both sides ◆ Plug 20 ft east of D-2 ◆ Area beyond (east) plug is totally overgrown & ditch is choked off |
| Ditch 4 | Starting at the easternmost end: <ul style="list-style-type: none"> ◆ Soil plug 30 ft from mouth ◆ No berm, low banks ◆ Water flowing towards the west during falling tide ◆ Ditch branches out over low areas 60 ft east of plug; light <i>Phragmites</i>, <i>Distichlis spicata</i> and <i>Spartina patens</i> ◆ Terminus in <i>Phragmites</i>, approximately 70 ft from tree line |
| Ditch 5 | Starting at the westernmost end: <ul style="list-style-type: none"> ◆ Terminus distinct, trails off into heavy <i>Phragmites</i> and <i>Iva frutescens</i> 300 ft west of the tree line ◆ Tide visibly running west ◆ Mid section of ditch contains light <i>Phragmites</i> and <i>Iva frutescens</i> on banks ◆ Ditch is approximately 4 ft wide |

| | |
|---------|--|
| | <ul style="list-style-type: none"> ◆ Mouth is approximately 12-15 ft wide with <i>Phragmites</i> and <i>Iva frutescens</i> on banks ◆ No plug visible at mouth, but shrub and <i>Phragmites</i> are growing in the center of the ditch 60 ft from the mouth. |
| Ditch 6 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Mouth is 6-7 ft in width, in heavy <i>Phragmites</i> ◆ Plug in good condition located 30 ft from mouth with <i>Phragmites</i> and <i>Iva frutescens</i> growing behind it ◆ 120 ft east of mouth has low banks, light <i>Phragmites</i>, <i>S. patens</i> and <i>Iva frutescens</i>; ditch is 2-3 ft in width ◆ Water flowing west ◆ <i>Phragmites</i>, <i>S. patens</i> and <i>Iva frutescens</i> near fish station D-6; ditch is 2-3 ft wide ◆ Terminus of ditch at fish station D-7; trails off into <i>Phragmites</i> and <i>Scirpus americanus</i> |
| Ditch 7 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Terminus of ditch in <i>Phragmites</i>, <i>S. patens</i> and <i>S. americanus</i> ◆ Water flowing west, visible 20 ft from terminus at fish station D-9 ◆ Moderate <i>Phragmites</i> cover on banks 100 ft from terminus; ditch is approximately 3 ft wide ◆ No <i>Phragmites</i> from D-8 to 70 ft west; <i>S. patens</i>, <i>S. americanus</i>, <i>D. spicata</i> and <i>S. alterniflora</i> ◆ Heavy <i>Phragmites</i> 7- ft west of D-8; ditch is straight and approximately 4-5 ft in width ◆ Ditch varies in width heading west as <i>Phragmites</i> density changes ◆ Plug in moderate condition 60 ft east of mouth, approximately 3.5 ft wide, covered with <i>Phragmites</i> ◆ Mouth of ditch is 4-5 ft wide, banks are lined with heavy <i>Phragmites</i> |
| Ditch 8 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Ditch is 10 ft wide at mouth, surrounded by heavy <i>Phragmites</i> ◆ Plug located 50 ft east of mouth; poor condition, <i>Phragmites</i> growing behind plug; evidence of muskrats ◆ Ditch choked with <i>Phragmites</i> 100 ft southeast of T4-200; ditch is approximately 1 foot wide ◆ Mid length of ditch there is a heavy area of <i>S. americanus</i> on north side, water flowing west ◆ Moderate <i>Phragmites</i> on banks near mid-length of ditch; banks low ◆ Heavy <i>Phragmites</i> near terminus; ditch is approximately 3-4 ft wide; merges with ditch running NW/SE |
| Ditch 9 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Terminus is approximately 500 ft from the tree line, choked with <i>Phragmites</i> ◆ Water flow visible; flowing west with tide ◆ Light <i>Phragmites</i> and <i>S. patens</i> at fish station D-10 for 80 ft on each side; no berm; ditch 1-3 ft wide ◆ Ditch surrounded and choked by <i>Phragmites</i> from mouth to approximately 400-500 ft inland ◆ Very narrow at points; less than 1 ft wide ◆ Plug with board and soil 100 ft west from river; very little water (1 ½ hours before low tide) |

| | |
|----------|--|
| | <ul style="list-style-type: none"> ◆ Mouth is 2 ft wide at mouth with very low water |
| Ditch 10 | <p>Starting from the easternmost end:</p> <ul style="list-style-type: none"> ◆ Eastern plug in poor shape; moderately holding water 60 ft from junction with small pool 10 ft in diameter ◆ Ditch turns south towards D-10; surrounded by dense <i>Phragmites</i> ◆ Light <i>Phragmites</i> with <i>S. patens</i> and <i>S. alterniflora</i> from plug to 300 ft east; ditch narrows to 2-3 ft wide ◆ Ditch becomes choked with <i>Phragmites</i> ◆ D-10 exits <i>Phragmites</i> to east out of Area 1 |
| Ditch 11 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Mouth to plug is 25 yards; ditch is approximately 3 ft wide ◆ Approximately 75 yards west <i>Iva frutescens</i> and <i>Phragmites</i> dominate both sides of the ditch ◆ Small ditch connects Ditch 11 to southern portion of tidal creek 100 yards west ◆ Short <i>Phragmites</i> and <i>S. americanus</i> between D-11 and tidal creek ◆ 200 yards off from Carmans a berm begins on the northern side of the ditch ◆ 300 yards west <i>Phragmites</i> is on the both sides; large strand of <i>Phragmites</i> on south side with small berm ◆ East plug is approximately 25 yards from east tidal creek; about 8 ft in length |

AREA 2

| | |
|---------|---|
| Ditch 1 | <p>Starting at easternmost end:</p> <ul style="list-style-type: none"> ◆ Terminus at tidal creek; 50 ft in diameter ◆ Large plug approximately 100 ft from terminus; 25 ft long; good condition ◆ Ditch width is 18-24 in, with clumps of <i>S. patens</i> vegetation ◆ Berm on north side of ditch from tidal creek heading west ◆ Ditch opens up to a 10 ft wide, 30 ft long pool with vegetation clumps; 40 yd from D-1, 100 yd from tidal creek ◆ <i>Phragmites</i> on east end of ditch for 30 yd ◆ <i>Phragmites</i> on south side of ditch, 120 yd east of tidal creek; <i>S. americanus</i> and <i>S. patens</i> on north side of ditch for 40 yd; berm on south side ◆ Vegetation turns to <i>S. patens</i> on north side, 35 yd from <i>S. americanus</i> edge; <i>Phragmites</i> thinning out on south side ◆ Light <i>Phragmites</i> on both sides; ditch width is 2-3 ft wide ◆ Berm on south side; <i>Iva frutescens</i> present ◆ Edges become more winding ◆ <i>Phragmites</i> ends on both sides; 40 yd west of mouth on south side becomes mostly <i>S. patens</i>; 20 yd west of mouth on north side mostly <i>S. americanus</i> ◆ Failed plug 10 yd east of mouth ◆ Small <i>Phragmites</i> community on north side 10-15 yd east of mouth; intermix vegetative community on south side |
| Ditch 2 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Very wide mouth ◆ <i>Phragmites</i> on south side of mouth; north side is tall-form <i>S. alterniflora</i>, leading into <i>Phragmites</i> ◆ <i>Phragmites</i> ends 30 yd west of mouth ◆ <i>S. patens</i>, <i>S. alterniflora</i> and <i>Pluchea purpurascens</i> on both sides; ditch width is 2-3 ft wide ◆ Ditch curves toward north ◆ Berm on north side ◆ Plug 30 yd from mouth near D-2; good condition ◆ Ditch curving towards the south ◆ Ditch width increases after plug to 35 in for approximately 50 yd (hour-glass shape) ◆ <i>Phragmites</i> choked off ditch west of eastern plug ◆ Plug 30 yd from tidal creek; <i>S. alterniflora</i>, <i>S. americanus</i> and <i>Iva frutescens</i> |
| Ditch 3 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Western plug 5 ft long 20 yd from tidal creek; <i>S. patens</i> and <i>S. alterniflora</i> from plug to tidal creek; no linear ditch ◆ <i>Phragmites</i> on both sides 30 yd west of tidal creek for 20 yd ◆ Water flowing from east to west ◆ Berms on south side 100 yd from <i>Phragmites</i> heading west ◆ Western plug 30 yd from Carmans River; moderately working; ditch width at 48 in east of plug ◆ Ditch opens up to a pool on the north and south side surrounded by <i>Phragmites</i> 10 yd west of the plug |

| | |
|---------|--|
| Ditch 4 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth 10 yd wide; cone shaped, narrowing down to 36 in ditch ◆ Western plug 30 yd from mouth; moderately working ◆ 10 in diameter pool 5 yd west of plug ◆ 2 small pools 50 yd east of mouth; 5 ft in diameter ◆ Ditch opens up to 5 ft diameter pool 75 yd east of mouth ◆ Monotypic <i>Phragmites</i> stand on both sides of ditch; 175 yd east of mouth ◆ <i>S. patens</i> and <i>S. alterniflora</i> on both sides of ditch for a distance of 165 yd heading east ◆ Plug 50 yd from end of <i>Phragmites</i> stand ◆ Ditch width east of plug is 36 in for 15 yd, then tapering off to 24 in wide ◆ East plug 15 yd west of tidal creek in <i>Phragmites</i>; 10 yd long; working; small pool on east end ◆ Berm on south side |
| Ditch 5 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Eastern plug 18 yd from tidal creek; 4 ft x 4 ft; failed ◆ Mouth opens up and branches out naturally; short form <i>S. alterniflora</i> vegetation ◆ Water flow from west to east ◆ West side of plug opens up to a small pool ◆ Ditch width is 48 in ◆ Monoculture of short form <i>S. alterniflora</i> on both sides of ditch, 50 yd west of plug ◆ Ditch tapers off from 36 in to 48 in ◆ <i>S. alterniflora</i> and <i>S. patens</i> mix 150 yd west of plug; <i>S. patens</i> dominating south side; <i>S. alterniflora</i> on north side of ditch ◆ Middle plug 200 yd from previous plug; 6 ft long; working ◆ Ditch 18 in wide ◆ 100 yd west of plug water flow is from east to west ◆ North edge of ditch becomes <i>S. americanus</i> and <i>S. alterniflora</i> mix into <i>Phragmites</i> ◆ 135 yd from middle plug, <i>Phragmites</i> dominates both sides of ditch ◆ Ditch linear; width from 18 in to 5 ft ◆ Western plug; failed ◆ Water flow near plug is from east to west ◆ Mouth is 25 yd wide |
| Ditch 6 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth 15 yd wide; tapers off to a 20 in ditch 25 yd east of mouth ◆ <i>S. alterniflora</i> on the north and south sides of ditch ◆ Tall and short form <i>S. alterniflora</i> with <i>Iva frutescens</i> on the north side of ditch, approximately 25 yd east of mouth; south side is short form <i>S. alterniflora</i> ◆ Western plug is 45 yd east of mouth; 6 ft long, 30 in wide; working ◆ Second plug 125 yd east of mouth, 5 ft long, 30 in wide ◆ <i>S. patens</i> on north side for 30 yd ◆ Small <i>Phragmites</i> stand with <i>S. americanus</i>, <i>S. patens</i> and short form <i>S. alterniflora</i> 220 yd east of mouth ◆ Plug 240 yd east of mouth; 10 ft long; working ◆ Eastern plug 270 yd from western plug; working; evidence of mu skrats ◆ Ditch width 4-5 ft; water flow from west to east |

| | |
|----------|---|
| | <ul style="list-style-type: none"> ◆ Tidal creek 20 yd from eastern plug |
| Ditch 7 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ 10 yd west of tidal creek <i>Iva frutescens</i> on north side, <i>Phragmites</i> on south side ◆ Eastern plug 6 ft wide, 10 ft long covered with <i>Iva frutescens</i> ◆ Short form <i>S. alterniflora</i> and <i>S. patens</i> mix on both sides 40 yd west of plug ◆ Ditch width is 30 in wide; water flowing from west to east ◆ 15 yd stand of <i>Phragmites</i> on both sides 80 yd west of tidal creek ◆ 20 yd of <i>S. patens</i> west of <i>Phragmites</i> stand ◆ 20 yd of <i>Phragmites</i> west of <i>S. patens</i> ◆ Ditch linear; 24 in wide for most of ditch length ◆ Western plug 190 yd west from tidal creek ◆ Mouth 10 ft wide; 15 yd from western plug |
| Ditch 8 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth of ditch is 7 yd wide, tapering off to a 3 ft ditch ◆ Western plug is 20 yd east of mouth; 4 ft long x 30 in wide; working ◆ <i>S. patens</i> and <i>S. alterniflora</i> mix on both sides of ditch 50 yd east of plug ◆ Eastern plug is 3 yd west of tidal creek; 8 ft long x 24 in wide |
| Ditch 9 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Eastern plug is 5 yd from tidal creek; 8 ft long, blends into marsh surface ◆ Ditch width is 30 in ◆ Short form <i>S. alterniflora</i> and <i>S. patens</i> mix on both sides of ditch ◆ Western plug is 6 ft long x 30 in wide; 15 yd from mouth ◆ Mouth is 12 ft wide |
| Ditch 10 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth is 8 ft wide ◆ Western plug is 10 yd east of mouth ◆ <i>S. patens</i> and <i>S. alterniflora</i> on north and south sides of ditch ◆ Western plug is 4 ft long x 5 ft wide; 25 yd west of tidal creek |
| Ditch 11 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Eastern plug is 5 yd west of tidal creek; 5 ft long x 30 in wide ◆ Ditch width is 30 in ◆ Western plug is 20 yd west of eastern plug; 5 ft long x 30 in wide ◆ Short form <i>S. alterniflora</i> and <i>S. patens</i> mix on north and south sides of ditch ◆ Mouth is 11 ft wide |

AREA 3

| | |
|---------|--|
| Ditch 1 | <p>Starting at easternmost end:</p> <ul style="list-style-type: none"> ◆ Terminus of ditch is 70 ft east of fish station D-1; heavy <i>Phragmites</i> on south side; <i>Iva frutescens</i>, <i>S. alterniflora</i> and <i>S. americanus</i> on north side ◆ Ditch 2.5 ft wide ◆ <i>Phragmites</i> on both sides west of D-1 ◆ Ditch narrows to less than 1 ft wide 60 ft west of D-1; <i>Phragmites</i> choking off ditch ◆ <i>S. alterniflora</i> and <i>S. americanus</i> for 180 ft ◆ Ditch curves slightly and varies between 2-4 ft wide with <i>Phragmites</i> on the north side and <i>S. patens</i>, <i>S. alterniflora</i> and <i>Iva frutescens</i> on the south side for 60 ft ◆ Vegetation changes to <i>Phragmites</i> on both sides of ditch; ditch curves slightly south ◆ Plug 30 ft east of mouth; 4 ft wide; moderately working ◆ Mouth in heavy <i>Phragmites</i>; 60 ft west of fish station D-2; ditch width is 1 ft wide |
| Ditch 2 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth of ditch is 4-5 ft wide; <i>S. alterniflora</i> and <i>S. patens</i> mix on both sides with some light <i>Phragmites</i> and <i>P. purpurascens</i> for a length of 150 ft ◆ Plug 50 ft east of mouth ◆ Water flowing from east to west ◆ Vegetation changes to <i>Phragmites</i> on both sides with <i>Iva frutescens</i>; ditch narrows to 3 ft wide for a distance of 45 ft to D-3, <i>Phragmites</i> choking ditch ◆ Ditch is 2.5 ft wide at D-3 with <i>S. patens</i>, <i>S. americanus</i> and <i>Phragmites</i> on both sides for 180 ft (between D-3 and D-4) ◆ <i>Phragmites</i> choking ditch east of D-3 for 300 ft ◆ Ditch opens up to a small panne (dry at low tide) with vegetation clumps of <i>S. patens</i>, <i>Phragmites</i>, <i>Iva frutescens</i> and <i>P. purpurascens</i>; 30 ft wide ◆ Terminus of ditch is 10 ft wide ending at eastern tidal creek; <i>Phragmites</i> on both sides |
| Ditch 3 | <p>Starting at the easternmost end:</p> <ul style="list-style-type: none"> ◆ Mouth of ditch is 15 ft wide ◆ Ditch branches off to the south 50 ft west of mouth ◆ Plug 30 ft west of mouth; 5 ft wide, covered with <i>Iva frutescens</i> and <i>Phragmites</i> ◆ <i>Iva frutescens</i>, <i>Phragmites</i>, <i>S. patens</i> on north side of ditch; <i>S. patens</i>, <i>Iva frutescens</i> and <i>P. purpurascens</i> on south side; east of fish station D-5 ◆ Ditch width is 3 ft ◆ Between D-5 and D-6 <i>S. patens</i>, <i>S. americanus</i>, <i>P. purpurascens</i> and tall-form <i>S. alterniflora</i> on both sides of ditch; berm on south side ◆ Berm on north side of ditch west of T2-00; ditch width is 1 ft ◆ <i>Iva frutescens</i> on both sides west of D-6; ditch width is 3 ft ◆ Plug 60 ft west of D-6; 4ft x 10 ft; working ◆ Ditch width is 5 ft east of plug |
| Ditch 4 | <p>Starting at the westernmost end:</p> <ul style="list-style-type: none"> ◆ Mouth of ditch is 5 ft wide ◆ Plug 30 ft west of mouth; 4 ft x 10 ft; working ◆ Ditch width east of plug is 3 ft wide ◆ Ditch intersects small ditch on north side, 360 ft east of plug (between D-7 and D-8) ◆ <i>S. patens</i>, <i>P. purpurascens</i>, and <i>S. americanus</i> on both sides of ditch; berm on south side |

IV. Chemical Parameters

4.1 Water Quality Monitoring in Ditches

At each of the fish stations, beginning in October 2003, hand-held YSI multi-parameter and pH meters were used to collect salinity, temperature, conductivity, pH, and dissolved oxygen concentrations measurements using the USFWS/USGS protocols (James-Pirri et al., 2002). These measurements are listed in Table 4-1.

4.2 Ditch Salinity Surveys

Salinity was measured along the mosquito ditches in November 2003 using a YSI meter in accordance with USFWS/USGS protocols (James-Pirri et al., 2002). Measurements were taken every 30 to 50 m, depending on the length of the ditch. These measurements may help identify fresh water influxes. Ditch salinity measurements are listed in Table 4-2.

4.3 Pore Water Salinity

Soil water salinity was measured at all 88 stations every 10-14 days during fall 2003 and summer/fall 2004, following the USFWS/USGS protocol (James-Pirri et al., 2002). A soil probe was used to extract water from 15 cm below the marsh surface. The soil probe is constructed of a stainless steel tubing (0.065 in inner diameter), 70 cm in length, with one end crimped and slotted to allow the entry of water. A short length of plastic tubing was attached to the opposite end of the probe. Water was drawn up through the probe by a syringe attached to the plastic tubing. Once several millimeters of water had been extracted with the probe, the depth of which the water was collected was recorded. Salinity readings were recorded by passing the extracted water through a piece of filter paper placed over the syringe nozzle onto the glass plate of a refractometer. Soil water salinity measurements are listed in Table 4-3.

4.4 Carmans River Water Quality

In July 2003, Suffolk County Department of Health Services (SCDHS) collected two rounds of samples at four stations on the River. Field parameters (temperature, depth, secchi disk depth, dissolved oxygen, specific conductivity, salinity and flow) were collected in accordance with SCDHS sampling protocols (SCDHS 2003) and the water samples were analyzed for the Department's full parameter suite (water quality indicators, nutrients, metals, and organic compounds including VOCs, SVOCs, and pesticides and metabolites) (Suffolk County 2003). Monitoring was conducted on a quarterly basis. Detections of analytes analyzed at the Carmans River sampling stations are listed in Table 4-4.

4.5 Nutrient Sampling

In July and August 2004, SCDHS sampled randomly selected fish stations throughout the four areas for to assess the amount of nutrients in the ditches. Nutrient sampling results are listed in Table 4-5.

4.6 Estuarine Water Quality

Following standard SCDHS sampling protocols (SCDHS 2003), water quality samples were collected by SCDHS on July 15th, July 29th, and October 15th, 2003. The samples were analyzed by PEHL, including a standard QA/QC review. Four samples (WWR001 – WWR004) were collected within WNWR. Three samples (WWNR011, WWNR021 and WWNR022) were taken from nearby areas. WWNR011 was collected from the east side of William Floyd Parkway spur between Bayfair Court and Roneck Court; WWNR021 was collected from beach #5 in Mastic, located at the south end of Oceanview Drive; and WWNR022 was collected from the town boat ramp located on the east side of Riviera Drive. The results for the estuarine water quality sampling are listed in Table 4-6. The complete list of inorganic compounds analyzed for each sample is listed in Table 4-7.

Table 4-1. Water Quality in Ditches

AREA 1

| Date | Station | Time | pH | Temp (C) | DO (mg/L) | Salinity (ppt) | Tidal Stage/Remarks |
|------------|---------|------|-----|----------|-----------|----------------|-------------------------|
